Upper Heyford, Oxfordshire, UK and Irvine, California, USA: 15th July 2021 – Everrati, a leading technology company specialising in the redefining and futureproofing of automotive icons through the integration of advanced electric vehicle powertrains, and Superformance, the leading manufacturer of 1960s-era continuation component sports cars, have formed a strategic partnership – with the first new model being an electrified version of the legendary GT40.

Everrati was founded to further the legacies of some of the most desirable and iconic cars in the world, redefining and precision re-engineering them with state-of-the-art electric drivetrains, maintaining and enhancing the character of the original. Each Everrati is fitted with a custom-designed electric power unit and battery system, leading to enhanced performance and a zero-emissions future.

Superformance offers a full line of high-performance component cars celebrating some of the most iconic vehicles of all time. All vehicles are built under license from trademark holders including GM and SAFIR GT40, adding authenticity and value. Sold as a rolling chassis, a Superformance car can be configured with heritage or modern drivetrains.

The Everrati and Superformance partnership will allow enthusiasts to drive an electric-powered GT40, with development of this first model already underway. A prototype chassis has been built and is being comprehensively adapted from ICE power to advanced electric propulsion at Everrati's UK development centre in Upper Heyford, a former US air base in the English Cotswolds.

As with all Everrati vehicles, meticulous attention to detail is being applied to key factors such as battery location and weight distribution to maintain and enhance the character and soul of the original. Further details on this first new model from the partnership and reimagined icon will be announced in the coming months.

Justin Lunny, Founder and CEO, Everrati: *"This is the perfect partnership. The sole focus of both Everrati and Superformance is iconic cars and Lance and his team are THE guys when it comes to authorised continuation chassis of some of the most legendary cars in history. Marrying these chassis with our advanced EV powertrains and precision engineering will enhance performance while keeping the essence and soul of the original. We aim to create the best electric driver's cars while, at the same time, future-proofing these true past masters.*

"So many legendary cars were created by Anglo American partnerships during the 1960s. In fact, the very first GT40 was brought to life in the early Sixties by a UK-based team led by expat British engineer, Roy Lunn, at Ford Advanced Vehicles in Slough. Its body was even made by Abbey Panels in Coventry, before the finished car was shipped to the US for its unveiling the day before the New York Auto Show, in April 1964.

“So, it feels highly appropriate for Everrati to be partnering with Superformance, furthering not only the legacy of automotive icons but the partnership between the UK and US. Another cross-Atlantic connection is that our development HQ is located on a former US air base in the Oxfordshire countryside.”

Lance Stander, CEO, Superformance: *“I’m very excited about the partnership we are announcing today. Justin and the team at Everrati have a compelling vision for the future, along with the engineering pedigree and expertise to reimagine this automotive icon for the 21st century. While I will always love a V8-powered vehicle, there is no doubting the ultra-high performance of Everrati’s advanced EV powertrains. I am genuinely impressed with the lengths to which Everrati goes to maintain the weight distribution and character of the original car. Electrification is the future in so many ways and adds another option for those who love classic sports cars.”*

Notes to Editors

Everrati™ – Everrati™ was founded in 2019 by fintech entrepreneur Justin Lunny, and long-term automotive specialist Nick Williams.

Both car enthusiasts from an early age, they became increasingly conscious of the wider impact combustion engines have on the environment.

Everrati was formed to redefine some of the world’s most iconic and performance cars enabling them to be used in a clean air, low-carbon world.

Today, Everrati™ offers its customers the ability to commission their own electric Mercedes-Benz SL W113 Pagoda, Porsche 911 (964) Coupe, Targa, and Convertible including Limited Edition models such as the officially licenced Gulf Signature Edition, and Land Rover Series IIA in a range of configurations.

Everrati™ designs, engineers and develops electric cars from a bespoke facility in Upper Heyford, Oxfordshire.

Safir GT40 Spares - Safir GT40 Spares, owner of the GT40 Trademark is proud to participate within the motorsport community to preserve and promote the iconic GT40 automobile.

Superformance – Since 1994, Superformance LLC has been distributing complete Continuation Shelby Cobras, Daytona’s, Corvettes, Grand Sports and GT40’s, along with rolling chassis replicas. Superformance products are aesthetically and dimensionally correct and are engineered in the image of some of the most iconic classic sports cars. All vehicles are built under license from trademark holders including Ford, Shelby, GM and SAFIR GT40, adding authenticity and value.

The Superformance factory is one of the world’s largest specialty car production facilities. It has produced and distributed more than 5,500 rolling chassis through 25 independent dealerships worldwide. The Superformance rolling chassis is completely assembled and ready for the buyer to install a drivetrain of their choice.

Superformance has an owner’s forum and car [registry](#); the Shelby’s are eligible for the Shelby Registry. Additional information is available at www.superformance.com, info@superformance.com or by calling a USA dealer at (800) 297-6253 or the corporate headquarters at (949) 900-1950.
