

## Finally, an EV Platform That Makes Sense for Low-Volume Manufacturers

**CES, Las Vegas | January 2, 2026** — Everrati and Aria Group Inc. will launch a new B2B electric vehicle platform at CES 2026 designed specifically for manufacturers that have been priced out of electrification.

The joint platform combines Everrati's OEM-grade, modular electric powertrain with Aria's lightweight composite chassis architecture to deliver a production-ready EV solution for low-volume OEMs, specialty vehicle programmes, heritage brands, and defence and off-road applications.

The result: dramatically lower cost, reduced development risk, and faster time to market compared with traditional clean-sheet EV programmes.

"This is about removing the structural barriers that have made low-volume electrification slow, expensive and risky," said **Justin Lunny, CEO of Everrati**. "By pairing a proven electric powertrain with a highly adaptable composite chassis, we're giving manufacturers a credible, scalable route to EVs without the usual financial burden."

**Clive Hawkins, Aria Group Inc.** CEO added: "Our customers consistently struggle to balance packaging, performance, cost and regulatory compliance. This partnership brings together two complementary technologies to solve that problem in a practical, commercially viable way."

The turnkey platform is engineered to support low- and medium-volume production, including programmes required to meet U.S. crash and regulatory standards. A joint development mule and demonstrator vehicle is planned, with active discussions already underway with prospective customers in North America and Europe.

The Everrati-Aria collaboration offers an alternative to bespoke EV development at a time when investors and policymakers are increasingly focused on scalable electrification.

**ENDS**

### Notes to editors:

#### **CES 2026**

Everrati will present the joint B2B offering with Aria at CES in Las Vegas, January 6-9, as a soft launch to potential partners, investors and industry stakeholders. This marks Everrati's first major U.S. showcase focused specifically on low-volume OEM electrification. Everrati and Aria's senior teams are available for meetings in the lobby bar at the Fontainebleau Hotel throughout the show. To arrange a slot, please email: [press@everrati.com](mailto:press@everrati.com).

**About Everrati**

Everrati is a UK-based electric powertrain technology company specialising in OEM-grade electrification solutions for low-volume manufacturers, niche OEM projects and specialist vehicle programmes. Through its “Powered by Everrati” platform, the company designs, tests and supplies modular electric powertrains that can be integrated into a wide range of vehicle architectures. Everrati’s approach focuses on flexibility, performance and reliability, enabling partners to bring electric vehicles to market faster and at lower development cost than traditional bespoke programmes.

**About Aria Group Inc.**

Aria Group is a U.S.-based engineering and manufacturing company with more than 30 years of experience delivering advanced vehicle programmes for established automakers, startups and specialty manufacturers. Through its composite chassis and vehicle architecture capabilities, Aria supports low- and medium-volume vehicle production, including platforms engineered to meet U.S. crash and regulatory requirements.
